OBJECTIVE

Seeking a challenging role in the field of Information Technology where I can apply and further develop my technical skills and continuously expand my knowledge to grow both professionally and personally within a dynamic and growth-oriented organization.

EDUCATION

Bachelor of Science in Computer Engineering **2025**
Specialization in Software Engineering
De La Salle University – Dasmariñas, Cavite

EXPERIENCE

Technical Support Intern **February 2024 – May 2024**

CEVA Logistics, Aseana Ave, Parañaque City, Metro Manila

- Managed server and device troubleshooting in a company setting, providing efficient technical support in resolving IT related problems.
- Gained hands-on experience in solving technical IT issues frequently encountered.
- Reformatting, reimaging of devices, installing operating systems and using BitLocker.
- Collaborated with team members for smooth operations and to guarantee efficiency.

SKILLS

Technical

- Web Development: *Building dynamic, responsive, and user-friendly web applications.*
- Frontend development and component-based UI design.
- Backend development: *RESTful API (auth, CRUD, data management).*
- Databases and Data handling

- Computer networks and Data Communications
- Software Installation and Configuration
- Hardware Diagnostics and Repair
- Network troubleshooting
- Computer VIsion / Image Processing

Programming Languages

- HTML / CSS / Bootstrap
- Python / Django
- React
- PHP
- Javascript / jQuery
- Express
- SQL / MSSQL / SQLite
- Java

PROJECTS

Portfolio Website

- Developed a responsive portfolio website using React and Bootstrap, featuring a messaging/contact system for user inquiries.

Coffee Bean Defect Detection System (Thesis Project)

- Developed a localhost-based web application for real-time detection of coffee bean defects using YOLOv11 and a controlled imaging setup.
- Built a full-stack system with Django, enabling users and administrators to analyze, visualize, and manage detection results.
- Implemented a computer vision pipeline with image segmentation, classification of 10+ defect types, and integration of camera-based hardware for batch analysis.

Location-Based Car Services Finder

- Built a web application on a local server (XAMPP) using PHP (backend), JavaScript (frontend interactivity), HTML/CSS (UI), and MySQL/MSSQL for database management.
- Integrated Google Maps API to enable drivers to locate nearby car-related stores such as repair shops, dealerships, and parts suppliers.
- Implemented dynamic features including user authentication, CRUD operations, and interactive map-based navigation.

Recipe Finder (Food API Integration)

- Built a client-side web application using JavaScript, HTML, and CSS for recipe search and meal planning.
- Integrated a public Food API to fetch and display recipes dynamically based on user queries.

Fitness Activity Recognition

- Created a computer vision system using Google Mediapipe to detect and count certain workout activities.
- Implemented pose estimation and motion tracking algorithms to accurately classify exercise repetitions through camera input.
- Built an interactive interface with live video feedback to support fitness tracking and performance monitoring.
